

A. First query: give every entry weight 1

Choose  $B = S + 1 = 31$ .  
Every hidden entry is smaller than B.

B. Second query: assign distinct digit weights

$3 + 248 + 18,259 = 18,510$   
Each entry has its own base-31 position.

C. Divide by 31: pass the quotient onward and keep the remainder
